- Sal-C® Toner 16 oz
- Sulfur Spot Treatment 4 oz (optional)
- Barrier Care Gel Cream 4 oz (optional)
- Headband
- Cotton round pads
- 4 x 4 esthetic wipe
- Fan
- Extractor Tool
- Gloves

STEP-BY-STEP

1

CLEANSE

Ultra Gentle Gel Cleanser:

Cleanse the entire area to be treated with a moderate amount of cleanser and rinse thoroughly with warm water. **Optional:** If a double cleanse is performed use **Barrier Balance Creamy Cleanser** can be used before **Ultra Gentle Gel Cleanser**.

2

TONE**Glycolic-Lactic Toner:**

Glycolic-Lactic Toner is always used before a peel treatment to degrease the skin while acting as the **Treatment Tolerance Test**. Moisten a cotton round pad and swipe over the entire area to be treated thoroughly and evenly. Ask your client if they are experiencing any tingling. Utilize the number scale (1-10) to help determine what your client is feeling. On a scale of 1 to 10, 10 being extremely irritating, ask what number they are experiencing. If your client feels a “3” or more do not proceed with a chemical peel. Opt for the **Acne Hydrating Treatment** instead.

3

PEEL SOLUTION

Take a 4 x 4 cotton esthetic wipe and fold it in half. Fold it in half one more time. Place the wipe directly onto the open bottle of **Clear Skin Peel 1** solution and invert the bottle, making a circle of solution on the pad. Move the bottle around the pad and repeat this four times in a circle.

Starting on the forehead, wipe evenly and apply the peel in panels to cover the entire facial area and upper neck. Do not go over an area more than once. Ask the client if they feel any tingling using the number scale (1-10). Fan the face to reduce the tingling. If the tingling does not calm down within two minutes, apply the **Barrier Care Gel Cream** and continue to fan the face. This should help reduce the tingling sensation.

If your client felt less than a “3”, apply one more layer of the **Clear Skin Peel 1** solution and fan it down. If the tingling does not calm down within two minutes, apply the **Barrier Care Gel Cream** and continue to fan their face. This should help reduce the tingling sensation. If your client is not sensitive, use **Clear Skin Peel 2** solution for the second layer. In subsequent treatments, you may opt to perform two layers of **Clear Skin Peel 2**. Do not apply **Barrier Care Gel Cream** if there isn't a need to reduce any tingling sensation.

4

EXTRACTIONS

The pores are now softened from the peel solution. Perform extractions then wipe the face thoroughly with **Sal-C® Toner** to finish up.

5

SULFUR SPOT TREATMENT (OPTIONAL)

For Inflamed acne, **Sulfur Spot Treatment** can be applied to the affected area for calming and antibacterial action. After 3 to 5 minutes, remove the **Sulfur Spot Treatment** by wiping with a 4x4 esthetic wipe soaked with **Soothing Radiance Toner** or **Moisture Balance Toner**. Do not apply if the client is allergic to sulfur.

6

FINISH

If the appointment is during the day, apply Face Reality sunscreen. If the appointment is in the evening, gently apply **Barrier Care Gel Cream** if needed to reduce any residual tingling.
