

General Peel Guidance

As a rule, **80%** of clearing success is attributed to the consistent and correct use of home care. Ideally, clients should be scheduled for bi-weekly treatments (for at least 3 months) to accelerate the clearing process and support their home care. Below you will find an overview of our peels, best practices, and frequently asked questions.

CLEAR SYNERGY PEEL 1-3

- Comprised of I-mandelic, salicylic, I-lactic, glycolic, and succinic acids
- Does not usually need to be removed – see details in Clear Synergy Peel Treatment Protocol
- Do not perform this treatment on pregnant and breastfeeding clients without their physician's written consent

CLEAR SKIN PEEL 1-3

- Comprised of varied TCA percentage (5%, 7.5% and 10%), I-mandelic, I-lactic, kojic, diglucosyl gallic acid, and potassium azeloyl diglycinate
- Does not usually need to be removed – see details in Clear Skin Peel Treatment Protocol
- Do not perform this treatment on pregnant or breastfeeding clients without their physician's written approval

BRIGHT SKIN PEEL 1

- Comprised of 20% I-lactic acid, diglucosyl gallic acid, potassium azeloyl diglycinate, kojic acid, hexanoyl dipeptide-3 norleucine acetate, hydrolyzed opuntia ficus-indica flower extract, and symphytum officinale callus culture extract
- This peel should always be removed – see details in Bright Skin Peel 1 Treatment Protocol
- Do not perform this treatment on pregnant or breastfeeding clients without their physician's written approval.

BEST PRACTICES

- Always perform a skin sensitivity test using **Glycolic-Lactic Toner**. If the sensation is a 3 or higher, do not perform a peel and instead opt for **Acne Hydrating Treatment**.
- You may not always perform a peel at every treatment. **Treatment Tolerance Test** dictates the necessity of a peel.
- For **Clear Skin Peels** and **Clear Synergy Peels**, we recommend not more than 2 layers of application per treatment.
- Clients will usually feel the **Bright Skin Peel 1** and **Clear Synergy Peels** more than the **Clear Skin Peel**. Make sure you set your client's expectations for that experience.

Pre and Post-Peel Guidance

PRE-PEEL GUIDANCE

- Review client intake form to verify that no contraindicated conditions currently exist (i.e. severe medical conditions, cold sores, etc.)
- Wait at least 2 weeks between the last peel, laser hair removal, microdermabrasion, and tanning.
- Wait at least 1 week between waxing and peel.
- Ensure client has stopped the use of any photosensitizing medications or prescription topicals at least 2 weeks prior, and Isotretinoin (Accutane) for at least 30 days prior to treatment.

POST-PEEL GUIDANCE

- Wait 6 hours to put any water on the skin and avoid sweat, heat and friction.
- No actives should be applied in the evening routine. Only cleanse, tone, and moisturize.
- Resume full routine the next day including active products (in the absence of any irritation/sensitivity after receiving a treatment).
- Keep skin hydrated, moisturized and protected with SPF.
- Allow at least 2 weeks after peel between laser hair removal, microdermabrasion.
- Allow at least 1 week after peel for waxing.

FAQS

HOW STRONG ARE FACE REALITY PEELS?

Face Reality peels are considered mild blends. Clients won't necessarily peel, though some clients may experience some micro peeling. There typically isn't downtime after receiving a Face Reality peel.

DOES MY CLIENT NEED TO STOP ACTIVES BEFORE A PEEL?

For new clients, confirm they are not using actives like adapalene, Retin-A, or Accutane. Returning clients of your acne program do not need to stop actives—because our peels are blends, they are mild enough to not require discontinued use of active home care products before receiving a peel.

HOW DO I KNOW WHEN TO INCREASE THE STRENGTH OF THE PEEL CLEAR SKIN PEELS AND CLEAR SYNERGY PEELS?

We suggest taking a progressive versus aggressive approach, increasing strength in subsequent treatments if needed. If the client is making good progress clearing, it isn't necessary to continue increasing the strength of the peel. Always consider their skin type and Fitzpatrick type when strengthening a treatment.

- **Example 1:** At the next appointment in 2 weeks, if the client feels a 2 or less during The Skin Tolerance Test, consider applying (1) layer of Peel 1, followed by (1) layer of Peel 2. Build from there, if needed, at the subsequent appointments, for example 2 layers of Peel 2 if appropriate.
- **Example 2:** If a client continues to feel a 3 or higher with Glycolic-Lactic Toner test at the first couple appointments, opt for the Acne Hydrating Treatment instead. Once they feel 2 or less with sensitivity test, then proceed with **Clear Skin Peel 1**, **Clear Synergy Peel 1**, or **Bright Skin Peel 1** if appropriate.
